Experience

•Developer *Aug 2026 – Present*

Endava Solutions, Bangalore Offline

- Engineered dynamic, responsive web modules using Java, SQL, and JavaScript/Tailwind, translating client requirements into production-ready software components.
- Optimized database queries and built backend logic for core business features, maintaining strict adherence to clean code standards and rigorous peer code reviews.

•Associate Developer *Aug 2025 – July 2026*

Endava Solutions, Bangalore Offline

- Completed a 15-week intensive internship covering HTML/CSS, JavaScript, SQL, and Java, with hands-on project work and real-world problem-solving.
- Transitioned from intern to full-time Associate Developer based on strong technical performance and adaptability.

•Founding Member *Mar 2025 – July 2025*

Nokasa, Bangalore Offline

- Designed and deployed smart IoT-enabled bins to collect old clothes, integrating electronics (ESP32 dev module) and mobile application with backend systems for data tracking and logistics.
- Implemented SQL database schema, optimized queries, and integrated REST APIs with IoT devices for seamless operations.
- Managed multi-disciplinary collaboration, ensuring high reliability, security, and availability of deployed systems.

Projects

•CashFlash – Real-Time Intelligent Payment Platform

A full-stack peer-to-peer payment platform integrating real-time transactions, speech processing, and local LLM analytics.

- Built a full-stack payment platform with Spring Boot, React, and MySQL, using WebSockets for real-time transaction updates.
- Integrated Hugging Face Whisper to auto-populate transfer details via voice and deployed a local Qwen 1.5B LLM for natural language admin-only DB queries.
- Technology Used: Spring Boot, React.js, MySQL, WebSockets, Qwen 1.5B, Whisper, Python.

•PeopleOps - Bench Talent Management Platform

An enterprise resource allocation platform built to streamline bench tracking and project matching using Artificial Intelligence.

- Adopted Specification-Driven Development (SpecKit) to decouple frontend and backend teams, enabling parallel execution and delivering the MVP 2 weeks ahead of a tight timeline.
- Developed high-throughput REST APIs using FastAPI and Python, utilizing JSONQuery to filter and match unallocated talent against open project requisitions with minimal latency.
- Technology Used: FastAPI, Python, React.js, SpecKit, JSONQuery, OpenAPI, PostgreSQL.

Technical Skills

Languages: Python, Java, HTML/CSS, SQL
Libraries: NumPy, Matplotlib, OpenCV, TensorFlow, Axios
Frameworks: React.js, Spring Boot, FastAPI
Tools: VS Code, Git, Google Colab, Docker, AWS

Achievements and Publications

•Scopus Indexed Research Publication Hinweis Research *Sept 2025*

- Co-authored and published research paper titled *"Mobility Assistance for Amyotrophic Lateral Sclerosis Patients using Eye Gaze Tracking"*.
- Indexed in Scopus database with persistent Scopus EID verification.

Education

•Sahyadri College of Engineering and Management, Mangalore *2021–2025*

Bachelor of Electronics and Communications Engineering CGPA: 8.01
